

Texnik topshiriq (TZ)

Loyiha: Online ta'lim platformasi (kurs sotish va boshqarish)

Texnologiya: Laravel + API (Swagger yoki Postman dokumentatsiya bilan)

Maqsad

Platforma orqali foydalanuvchilar (student, mentor, admin) o'z rollariga qarab:

- **Studentlar:** ro'yxatdan o'tishi, profilini boshqarishi, admin biriktirgan kurslarni o'qishi.
- **Mentorlar:** kurslari bo'yicha modullar va darslarni qo'shishi.
- **Admin (SEO):** kategoriya, mentor, kurs yaratishi va studentlarni kurslarga biriktirishi.

Rollar va funksiyalar

1. Student

- Ro'yxatdan o'tish (ism, familiya, telefon raqam, parol).
- Login qilish (telefon, parol).
- Profilini ko'rish va tahrirlash (ism, familiya, parol, avatar).
- Admin biriktirgan kurslarini ko'rish.
- Kurs → Modul → Darslarni ko'rish (video, fayl).

2. Mentor

- O'ziga biriktirilgan kurslarni ko'rish.
- Kursga biriktirilgan studentlarni ko'rish.
- Kurs ichida modul yaratish.
- Modul ichida dars yaratish (video va fayl bilan).
- Profilida ijtimoiy tarmoqlar (Linkedin, Instagram, Telegram).

3. Admin (SEO)

- Kategoriyalar yaratish va boshqarish.
- Mentor yaratish (ism, familiya, telefon, parol, ijtimoiy tarmoqlar).
- Kurs yaratish (nomi, narxi, rasmi, izoh, kategoriya, mentor biriktirish).
- Studentni kursga biriktirish.
- Umumiy tizimni boshqarish.

Database Strukturasi

Users

- id
- first_name
- last_name
- phone (unique)
- password
- avatar (nullable)
- role: enum(student, mentor, admin)

Categories

- id
- name
- slug

Courses

- id
- title
- description
- price
- image
- category_id (FK)
- mentor_id (FK)

Course_Student (Pivot)

- id
- course_id (FK)
- student_id (FK)
- assigned_by (FK → users.id, admin)
- assigned_at (datetime)
- status (active, expired, pending)

Modules

- id
- title
- course_id (FK)
- order

Lessons

- id
- title
- content

- video_url
- file_url
- module_id (FK)
- order

Mentor_Socials

- id
- mentor_id (FK)
- platform (Linkedin, Instagram, Telegram)
- url

API Endpoints

Auth

- POST /auth/register – student ro‘yxatdan o‘tadi.
- POST /auth/login – login.

Student API

- GET /student/profile – profilni olish.
- PUT /student/profile – profilni tahrirlash.
- GET /student/courses – admin biriktirgan kurslar ro‘yxati.
- GET /student/courses/{id} – kurs detali (modullar, darslar bilan).

Mentor API

- GET /mentor/courses – mentor kurslari.
- GET /mentor/courses/{id}/students – kurs studentlari.
- POST /mentor/courses/{id}/modules – modul qo‘shish.
- POST /mentor/modules/{id}/lessons – dars qo‘shish.

Admin API

- POST /admin/categories – kategoriya yaratish.
- POST /admin/mentors – mentor yaratish.
- POST /admin/courses – kurs yaratish.
- POST /admin/students/{id}/assign-course – studentga kurs biriktirish.
- GET /admin/students/{id}/courses – student kurslari.

Landing Page API

- GET /courses – barcha kurslar (filter: kategoriya, search).
- GET /courses/{id} – kurs detali.
- GET /categories – barcha kategoriyalar.
- GET /mentors – barcha mentorlar.
- GET /mentors/{id} – mentor detali.
- GET /landing – asosiy sahifa uchun (top kurslar, top mentorlar, kategoriyalar).

- Har bir endpoint:
 - Method (GET, POST, PUT, DELETE)
 - Auth (token kerakmi yoki yo‘q)
 - Request body (json formatda)
 - Response (success va error misollari bilan)
